<b>8</b>	<b>Residency Program Matches, Class of 2014</b>

## Introduction

The following report summarizes graduate medical education outcomes for the Touro University College of Osteopathic Medicine graduating class of 2014. This report is distributed to the College of Osteopathic Medicine faculty, staff and students, is publicly posted on the Touro University California website, and is prepared in compliance with Standard 8.3 of the Commission on Osteopathic College Accreditation.

An essential part of the College's mission is the placement of all graduates into the residency training of their choice. The fourth and final year of a student's osteopathic medical training in a college of osteopathic medicine includes completing all requirements for graduation, preparing an extensive application to residency training programs, a series of clinical training clerkships at residency training sites, and formal interviews for residency placement. Placement is determined by a computerized analysis of the preferences of all applicants nationwide combined with the preferences of all residency programs. The computer analysis allows for only one placement per student and is wholly optimized toward the student's preference. This experience collectively is referred to as "the Match".

While all medical schools strive to help their students 'succeed' in the Match, measuring that success is tempered by a number of factors. Certainly, having 100% of the graduating class placed into a residency is a minimum goal. The current expectation of the accrediting commission is that colleges will achieve 98% placement over any three-year period. This report is prepared as an exhibit of our program's "match rate", beginning as required with the 2013-2014 graduating year.

Beyond the attainment of a residency placement, the more specific goal of the college is that each student is personally and professionally fulfilled by their individual residency placement. Because the algorithm aligns the student's preference list with the ranking of applicants submitted by residency programs, the optimal outcome for each student is that they receive their "first choice" in the Match. A student's rank list is known only to them, so any institutional statement of how many graduates receive their first choice in the Match is derived from information that must be offered by students back to their college.

The ratio of qualified applicants in a given discipline, family circumstances, and geographical preferences all influence choices and outcomes in the Match. For this reason a comprehensive analysis of our residency outcomes is produced separately (see *2008-2014 Cumulative Residency Report*).

**COMMISSION ON OSTEOPATHIC COLLEGE ACCREDITATION Standard 8.3**

To comply with accrediting standards each college of osteopathic medicine must satisfy COCA Standard 8.3:

**GME Accountability Report**

The COM must develop a retrospective GME Accountability Report based on information reported by the COM on the AACOM Annual Report, demonstrating that the COM's mission and objectives are being met. The methods used to develop the report must be fully described and documented. The report must demonstrate the number of graduates entering GME, the positions available in the COM's affiliated OPTI, the historic percentage of match participation (AOA, NRMP, military, etc.), final placement, the number/percentage of eligible students unsuccessful in the matches, and the residency choices of its graduates.

*Guideline: COMs should strive to place 100% of their graduates into GME programs and devote the necessary resources to obtain that goal. At a minimum, this retrospective data should demonstrate a 3-year rolling average final placement rate of 98% for those students eligible and participating who entered the AOA, NRMP, or military, etc. matches.*

This report presents the following data:

- Number of graduates entering GME from the Class of 2014
- Residency positions available in OPTI-WEST
- Percentage of match participation in the AOA, Military, NRMP and San Francisco match systems
- Final placement numbers in those systems
- Number and percentage of eligible students unsuccessful in the matches
- Residency choices of the 2014 graduates

## Methodology

### ***Number of graduates entering GME from the Class of 2014***

Data were tabulated from enrollment in the Electronic Residency Application Service (ERAS), the National Board of Osteopathic Medical Examination (NBOME), and the Touro University California Registrar. A student was considered in this category if they registered with ERAS, had passed or were scheduled to receive scores for all COMLEX exam requirements prior to 1 June 2014, and the Registrar affirmed them as on schedule to graduate.

### ***Residency positions available in OPTI-WEST***

The number of positions is tabulated from the published listing of AOA-verified positions, prorated for only PGY-1, for OPTI-WEST programs on [www.opportunities.osteopathic.org](http://www.opportunities.osteopathic.org).

### ***Percentage of match participation in the AOA, Military, NRMP and San Francisco match systems***

This is calculated by dividing the number of graduates reported as participating in the match systems (by the systems themselves) by the total number of graduates entering GME.

### ***Final placement numbers in those systems***

This is calculated from the official match reports generated by the match systems, including the SOAP reports from the NRMP match system, and the list of all applicant matches from the National Matching Services system. These data are later affirmed by each student as part of the preparation of the official residency match list database as well as the Commencement Program.

### ***Number and percentage of eligible students unsuccessful in the matches***

These values are calculated by subtracting the roster totals of the above criterion (final placement numbers) from the first criterion (number of graduates entering GME).

### ***Residency choices of the 2014 graduates***

As confirmed by the criteria above, the list of matched programs is organized alphabetically by discipline into a single table (see last page).

**Number of graduates entering GME from the Class of 2014 = 122****PGY-1 Residency positions available in OPTI-WEST**
